Direct Gas Fired Conveyor Oven

Principle

Middleby Marshall PS Series conveyor ovens bake both faster and at a lower temperature than other ovens. Patented vertical columns of hot air move heat aerodynamically instead of using high temperatures. The streams of hot air remove the boundary layers of cool heavy air which tend to insulate the product. This gives very rapid baking without burning. All Middleby ovens are designed to cook a multitude of products including pizza, seafood, bagels, ethnic foods and more.

Standard Features

- Impingement PLUS! low oven profile and dual air return
- Patented EMS Energy Management System reduces gas consumption and increases cooking efficiency
- 55"/1397mm-long cooking chamber
- 32"/813mm-wide, 90"/2286mm-long conveyor belt
- Stackable up to four units high
- Patented "Jet Sweep" impingement process that delivers constant heat to the chamber
- Microprocessor-controlled bake time/conveyor speed
- Customer-specific adjustable jet fingers that allow control of heat delivery
- · Stainless steel front, sides and top
- Front-loading window with cool handle
- Reversible conveyor direction

Optional Features

 Split belt - two 15"/381mm belts with individually-adjustable speed settings

Conserves Energy

Middleby ovens provide very efficient heat transfer to product. Energy is conserved as air is recycled from heater to product, with minimum flue or vent loss.

Cleanability

PS555 ovens are designed for easy cleaning. Removable parts include: crumb pans, end panels, air fingers, and a folding conveyor belt assembly.

Easily Serviced

Control compartment is designed for quick and easy access. Primary electrical components are door-mounted.

Warranty

All PS555 models have a one year parts and labor warranty. Oven start-up and demonstration are included at no additional charge (USA only).

Ventilation

For installation under a ventilation hood only.
